TO WHOM IT MAY CONCERN:

Please be advised that we have collected samples of the sludge from the property used by Mr. Vincent Golembiowski and they are presently being analysed by the Ohio Department of Health laboratory to see if any injurious substances are contained there-in.

We have also contacted Mr. Glenn Maddy who tells us that he had a tree expert examine the dead trees and in his opinion the trees were being drowned because of the high ground water level in the area.

If this situation should prove to be one of public health you may rest assured that your Health Department will take the necessary steps to eliminate the problem, but if it should prove that the conditions are being brought about by a poor drainage situation we will not be able to help you.

Since we must deal in fact and not accusation it is necessary that we be in a position to prove anything we might say and for that reason there will be a slight delay until the laboratory reports its findings.

Sincerely,

*Richard M. Dern R.S.*
